

Message of Greeting by Dr. Gerd Müller

Federal Minister for Economic Cooperation and Development

Founding event "Global Energy Solutions e. V."

Ulm, August 27, 2020

Energy, climate and development are key issues of our time and are closely interlinked. I myself and the Federal Ministry for Economic Cooperation and Development have been active in this field for years. International cooperation, e.g. in the field of energy using the world's great solar deserts, is a key issue. Another is the production of gigantic quantities of green hydrogen and its combination with CO₂ to produce synthetic fuels - such as methanol - as a kind of "liquid electricity". The topic concerns economic development, e.g. in Africa, as well as the industrial policy prospects of our country and Europe in the face of difficult international developments, e.g. in the USA and China.

In this context, I am pleased that high-profile experts and thought leaders from many areas of society will work together in the organization "Global Energy Solutions e. V." in order to identify sustainable paths in the areas of energy, climate and development under difficult boundary conditions.

The Federal Ministry for Economic Cooperation and Development and I myself have supported the founding of "Global Energy Solutions e.V." from the very beginning.

I wish "Global Energy Solutions e. V." many successes and a beneficial impact on the world.

Dr. Gerd Müller

Federal Minister for Economic Cooperation and Development
